METHODS AND DEVICES FOR PREDICTION OF HYPOGLYCEMIC
EVENTS

Abstract of the Disclosure

- 5 Described herein are methods, devices, and microprocessors useful for predicting a hypoglycemic event in a subject. The hypoglycemic predictive approach described herein utilizes information obtained from a data stream, e.g., frequently obtained glucose values (current and/or predicted), body temperature, and/or skin conductance, to predict incipient hypoglycemic events and to alert the user.
